

Trust Dyson to secure your wind-farm foundation anchoring needs!

TIMELINESS Dyson understands the importance of meeting your build-schedule timelines. We offer quick lead-times, flexibility in scheduling, plus we can deliver all your foundation anchoring essentials: Rods, Washers, Nuts, PVC Sleeves, Bolt-Caps and Grease. We help make the complex simple.

QUALITY Failure in the ground has a catastrophic effect on your timeline and costs. By manufacturing both Rods and Nuts in the same Ohio facility, forging and heat-treating all of our Coil-Nuts, and offering 100% pre-tensioning of Rods and a proprietary thread profile, Dyson ensures your foundation bolts fit and function properly and securely every time!

PRICE Dyson offers competitive prices to help you win more jobs and avoid job-cost overruns. We work closely with the mills to keep material cost low while ensuring complete traceability for every product we make.
